

CPP Calculator Update

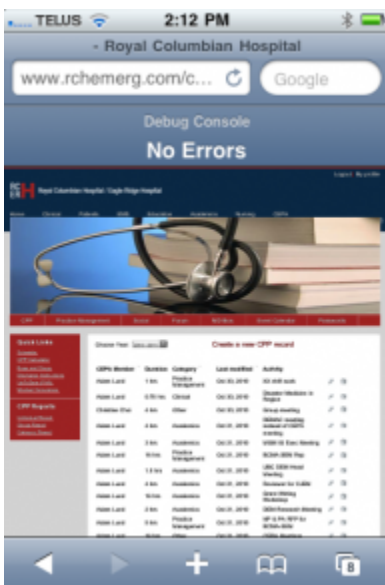

Published on Oct 30, 2010

Did you know that you can make the CEPA Practice Plan (CPP) Calculator an "App" or "Link" right off of your iPhone home page?

(Click on the Title above to see the full article)

I have it on the third row, 2nd icon in, and have called it "CPP Hours". That way, if you do something for the group, you can put it in at any time. It will connect to the web page and you can log in and enter your hours, or edit hours you have already submitted.

Once you click on the icon, it will open your browser and show you the same screen you'll see on your regular computer. If you aren't logged in, you'll have to enter your username and password at this stage.

Click on the link to add new CPP hours, and the following screen will appear. Zoom in if you need to for easier reading.

Then, enter your hours, submit it, and you are done!

The screenshot shows a mobile application interface on a TELUS network at 2:12 PM. The app has a red header with navigation options: CPP, Practice Management, Social, Forum, and MD Blog. A left sidebar contains 'Quick Links' (Schedule, CPP Calculator, Report and Email, Dashboard, Individual Reports, My Calendar, My Profile) and 'CPP Reports' (Individual Report, Group Report, Calendar Report). The main content area is titled 'Back to the CPP list' and contains a form for entering activity details. The form fields are: 'Hours for:' (dropdown), 'Last Modified: N/A', 'Reporting Year:' (dropdown), 'Category of activity:' (dropdown), 'Date of activity (YYYY-MM-DD):' (date picker), 'Date description:' (text input), 'Title of activity:' (text input), 'Description of activity:' (text input), 'Duration of activity in hours (ex: 5.25):' (text input), 'Declarations/comment:' (text input), and 'Special note for email:' (text input). A bottom navigation bar includes back, forward, home, and search icons.

If you need help setting it up, catch me at work or a meeting and I'll show you how.

Later,

Adam
